Agenda

InfoX

- Problem Statement
- Our Approach
- Features
- User Interface
- System Architecture and Diagram
- Tools and Libraries Used

Agenda

Problem Statement

- Powering rural regions through smartphones with sparse or limited network connections.
- Mobile phones penetration has increased significantly in rural India over past few years.
- However phones have sporadic data connection (1-4 hrs. of connectivity) with an average speed of 56 Kbps.
- Under such constraints one has to provide rich text content like Weather, Educational content , videos (size : 3 – 8 MB) and audio.

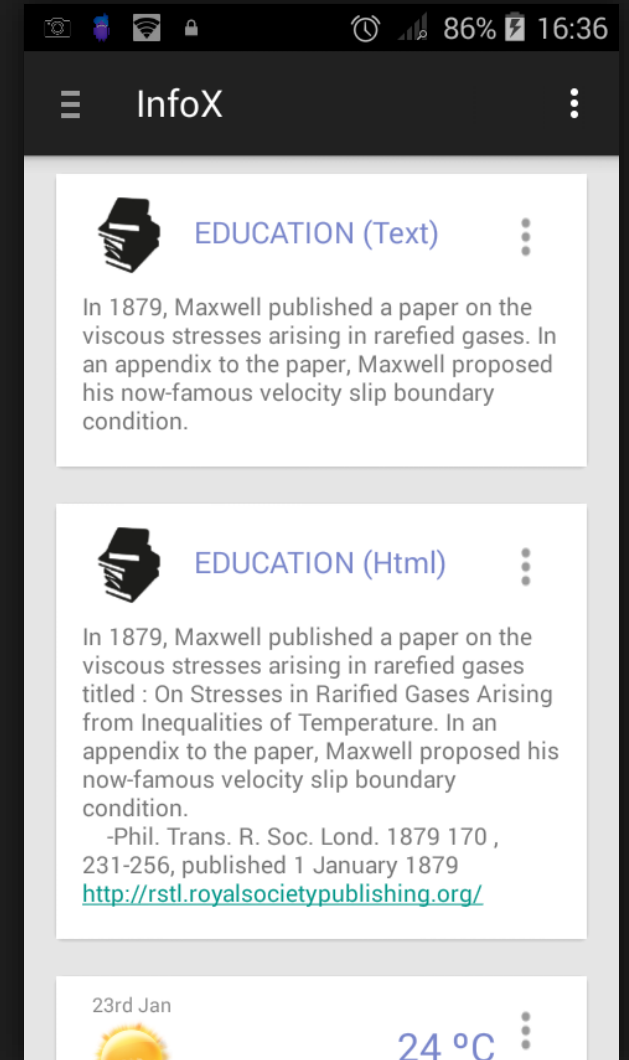

Agenda

Our Approach

- Android Application (62% global market share)[#]
 - Easily Accessible
 - 20 billion text messages sent daily worldwide
 - 93 million "**selfies**" snapped each day
 - 1.5 trillion steps tracked per day
 - Phones are checked at least 100 billion times each day
 - Cost
 - ~6000₹ with latest OS
 - Development
 - Cross-Platform Support
 - Easy Debugging (Emulated / USB)

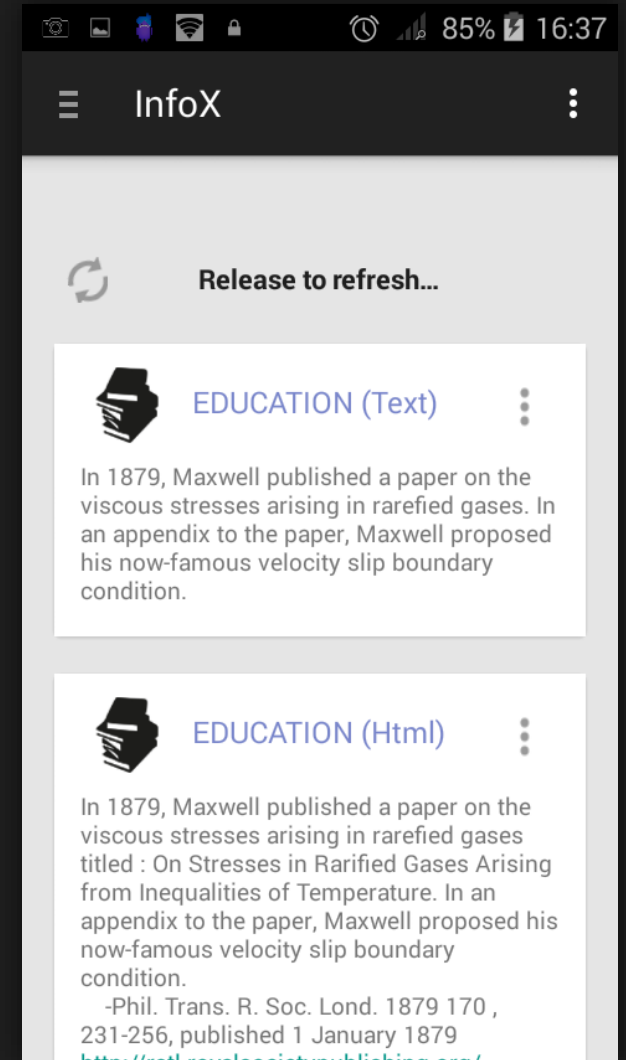

Google I/O 2014

Agenda

Our Approach

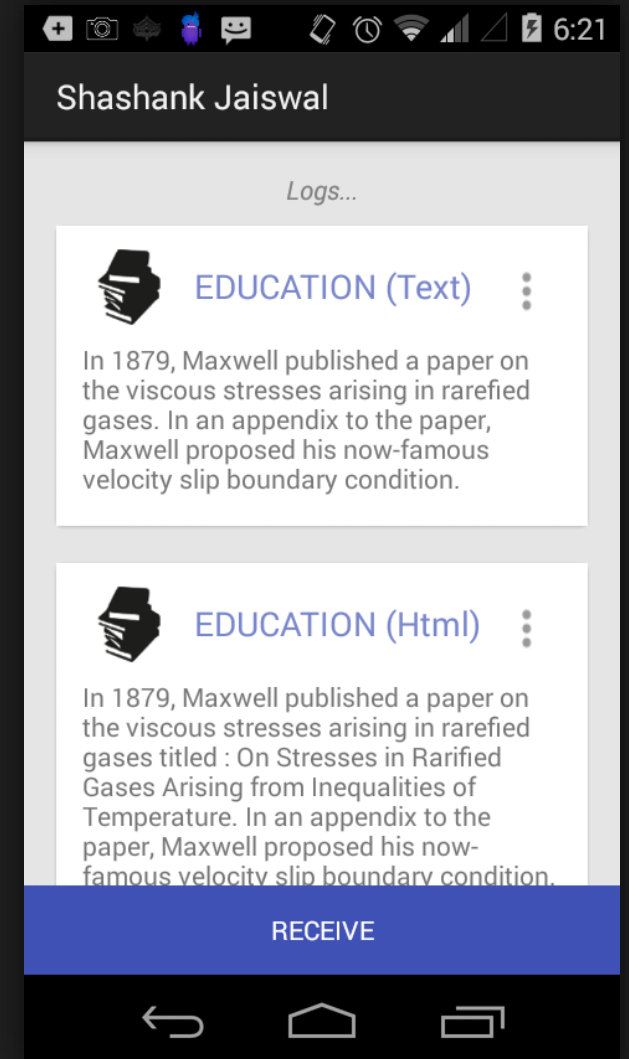

- Content delivery :
 - Through 2G /3G - Net Connectivity

Agenda

Our Approach

- Content delivery :
 - Through 2G-Net Connectivity
- Peer to Peer Network Connectivity
 - All the contacts in a user device who also use the same application serves as a list of potential peers for that particular user.
 - Our idea is based on the concept of **fetch and share** i.e.
 - Once a device gets some data its peers need not to fetch the same data again.
 - And similarly if that device needs data and it is with one of his peers he need not to download it from server again.

Agenda

Our Approach

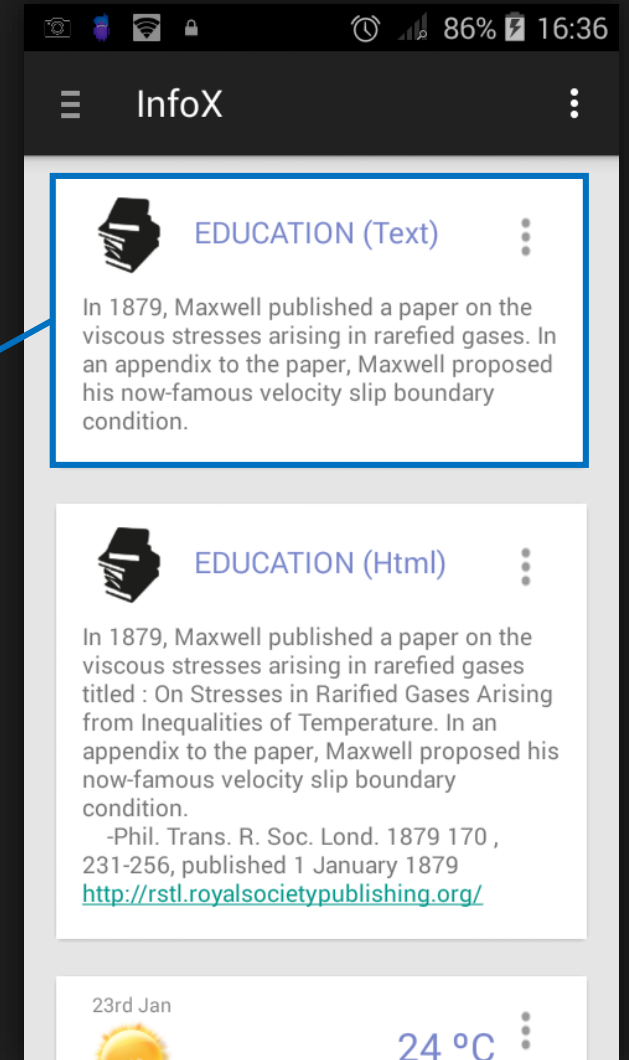

- Content delivery :
 - Peer to Peer Network Connectivity

content_id

1. Unique
2. Same on server Db and local Db

time_expiry

1. Local expired content gets deleted when user reconnects to server.
2. Content on the server is also deleted after expiry.

Agenda

Features: A closer look

content_id : 1

time_expiry : 20150201232425

file_name : ""

time_added : 20150101232425

lang_id : "EN"

content_type_id : "tile_education"

category_id : "EDU"

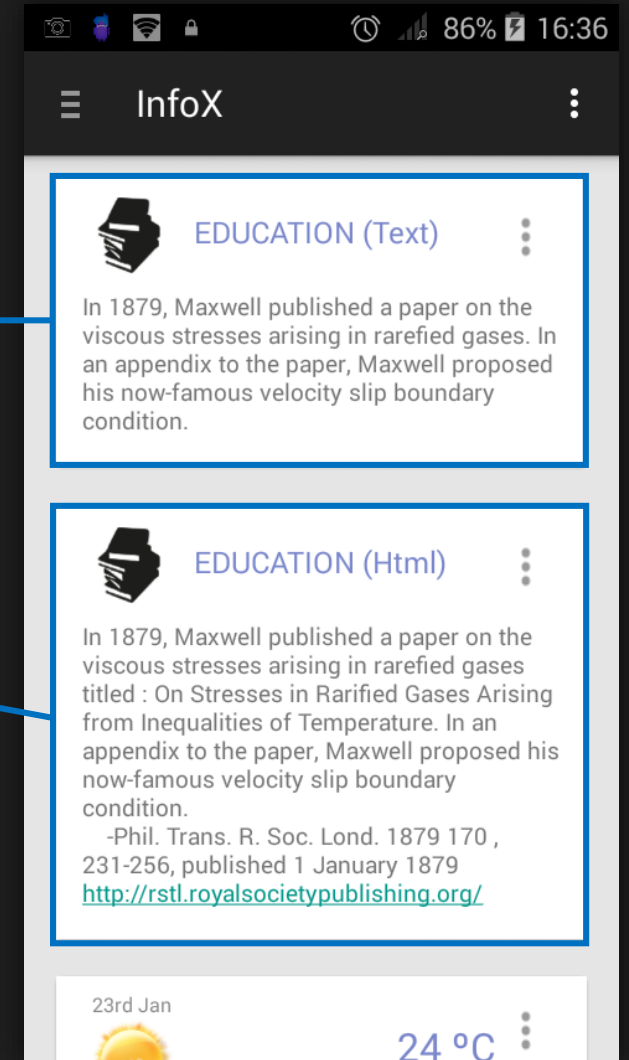

file_path : " < Content > "

Agenda

Features: A closer look

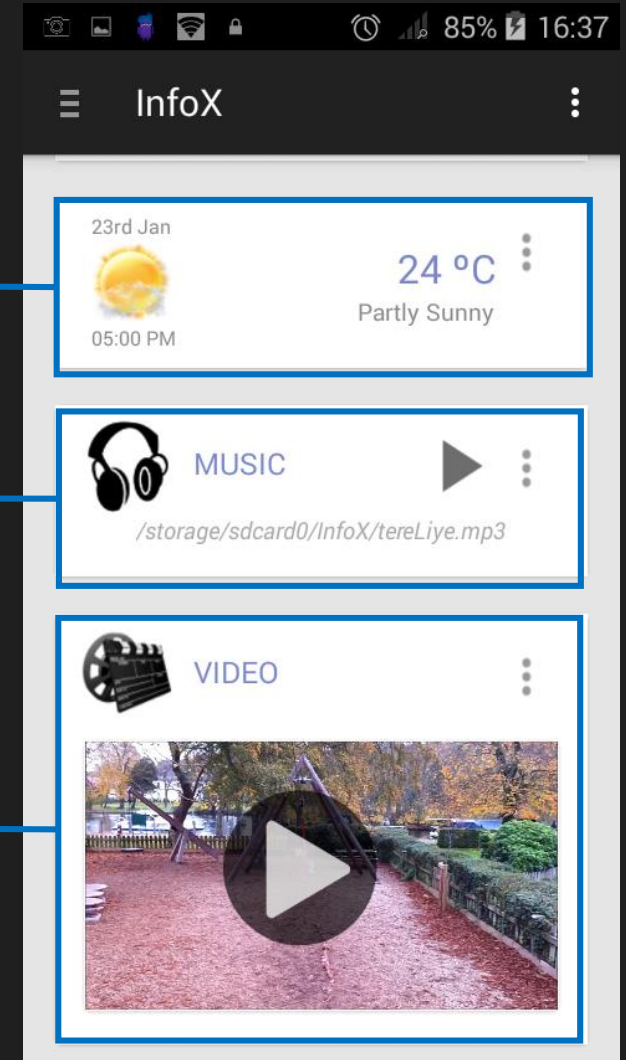

- Inbuilt Utilities :
 - Text Reader
- HTML Parser

Agenda

Features: A closer look

- Inbuilt Utilities :
 - Weather Content Reader
- Audio Content Renderer
- Video Content Renderer

Agenda

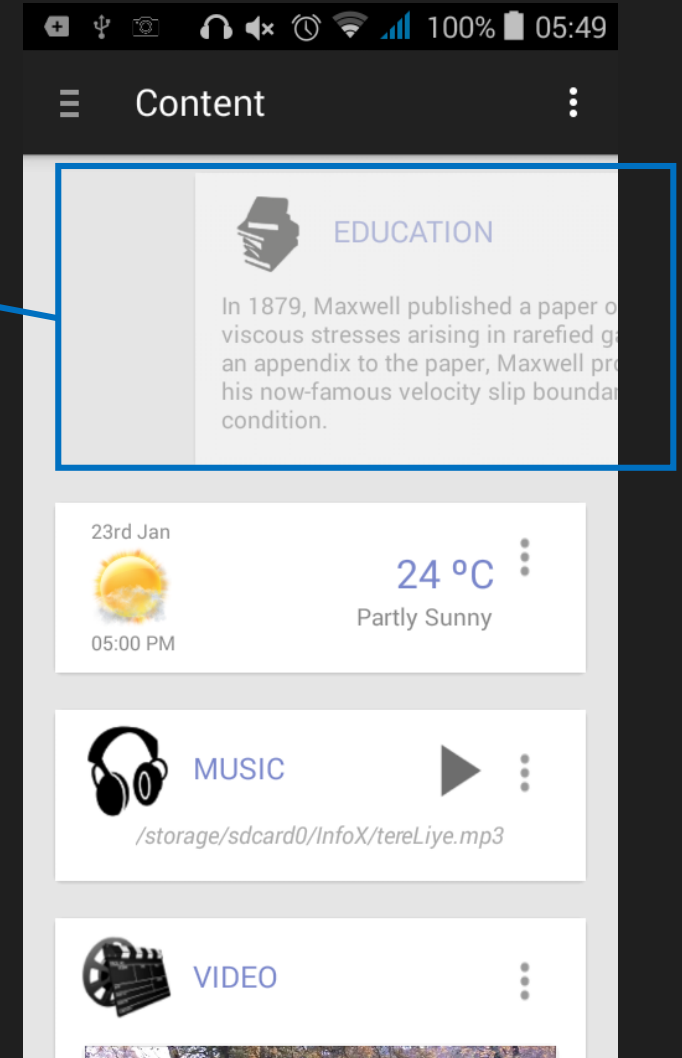

Features: A closer look

- Inbuilt text, html, audio, video, weather readers.
- Ability to set user preferences for different categories of content and fetch data from the server on that basis.
- Automatic connection to the backend server for fetching content whenever internet connection is available.
- Ability to share data among peers
 - to minimize dependence of the devices on the server and
 - also efficient resource utilization.
- The device advertises its own presence on Wi-Fi interfaces as well as performs automatic discovery of nearby peers.

Agenda

Interactive and Intuitive User Interface

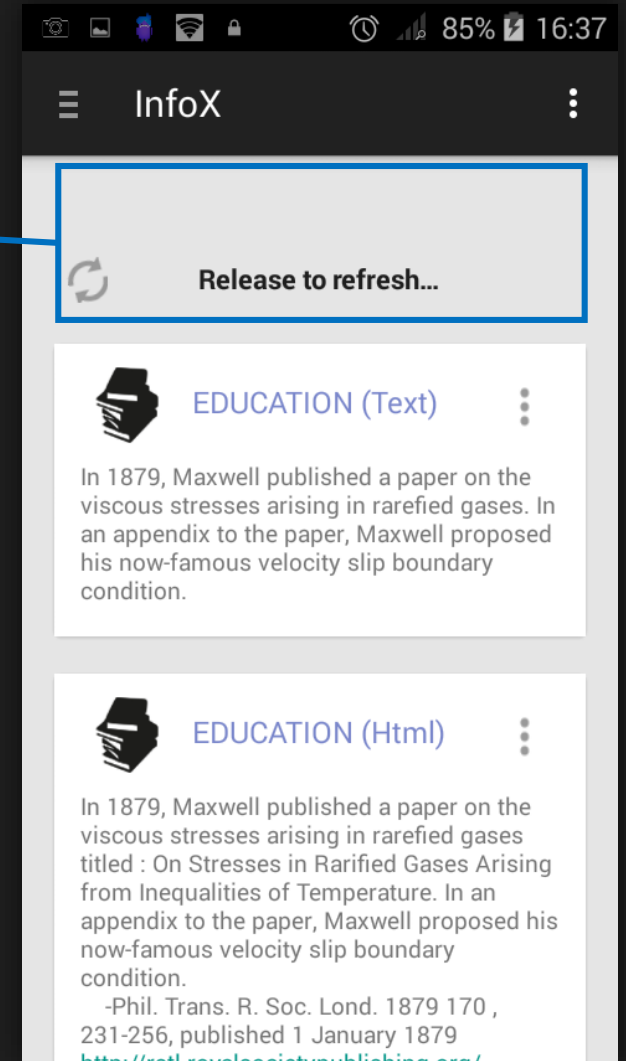

- Swipe to Delete Temporarily / Permanently

Agenda

Interactive and Intuitive User Interface

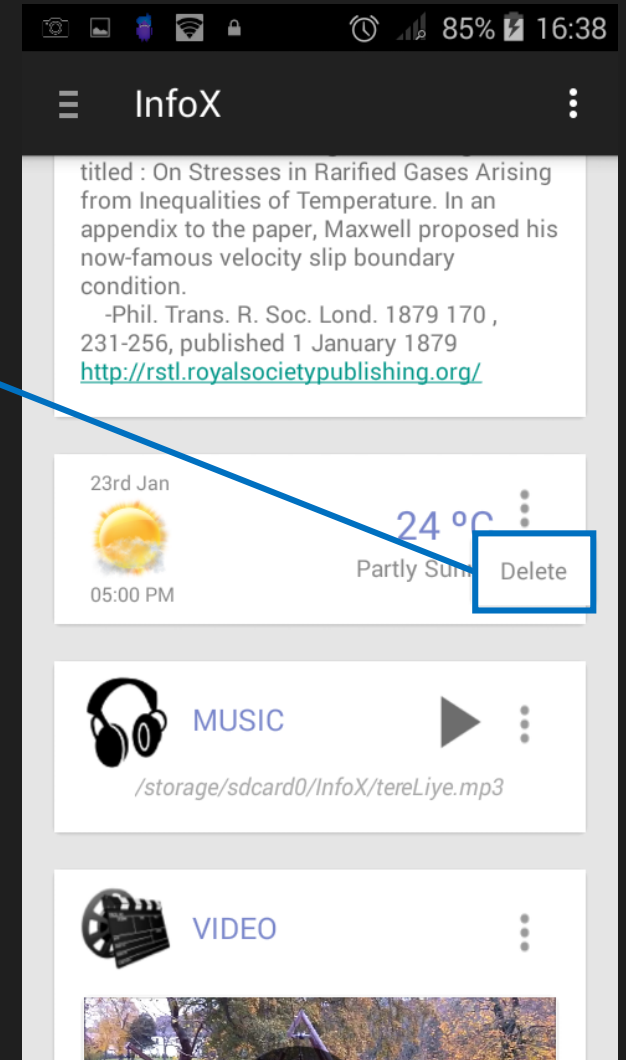

- Pull and Release to Refresh

Agenda

Interactive and Intuitive User Interface

- Dropdown associated with each content

Agenda

Interactive and Intuitive User Interface

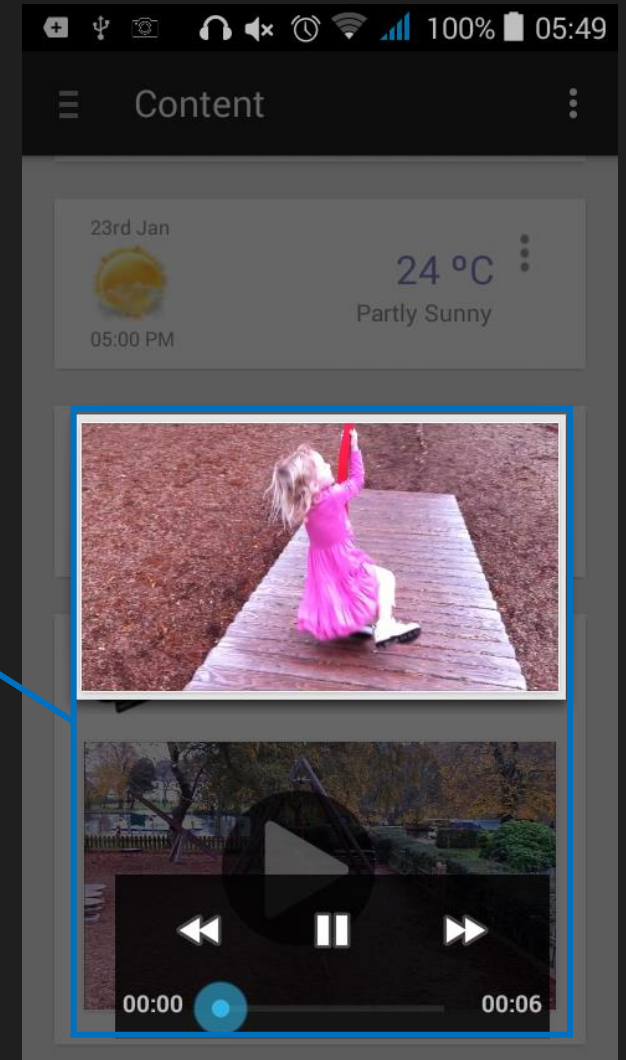

- Audio Content Rendering

Agenda

Interactive and Intuitive User Interface

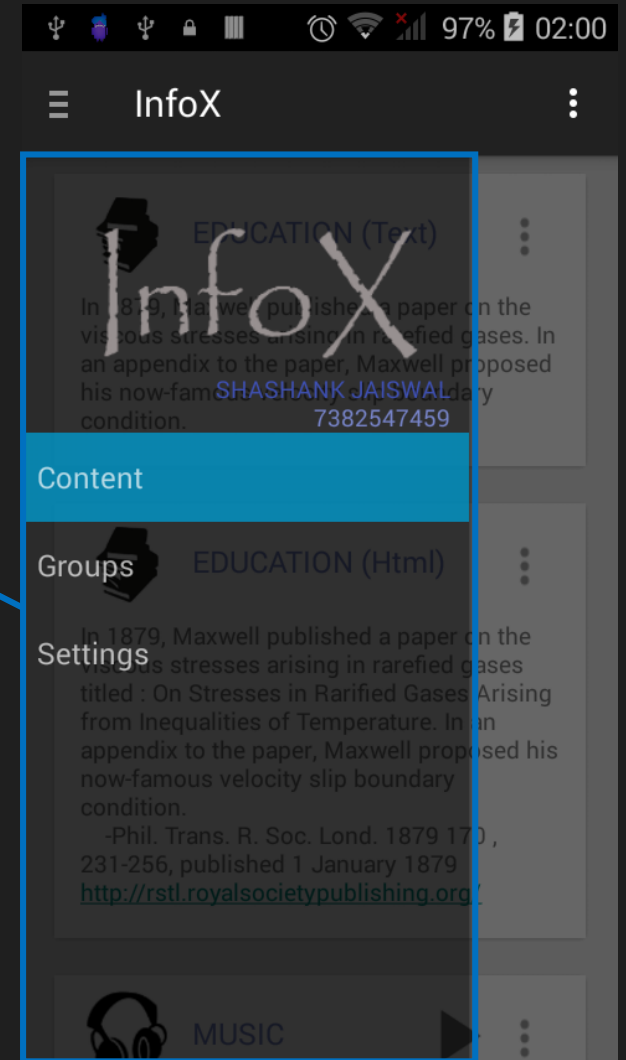

- Video Content Rendering

Agenda

Interactive and Intuitive User Interface

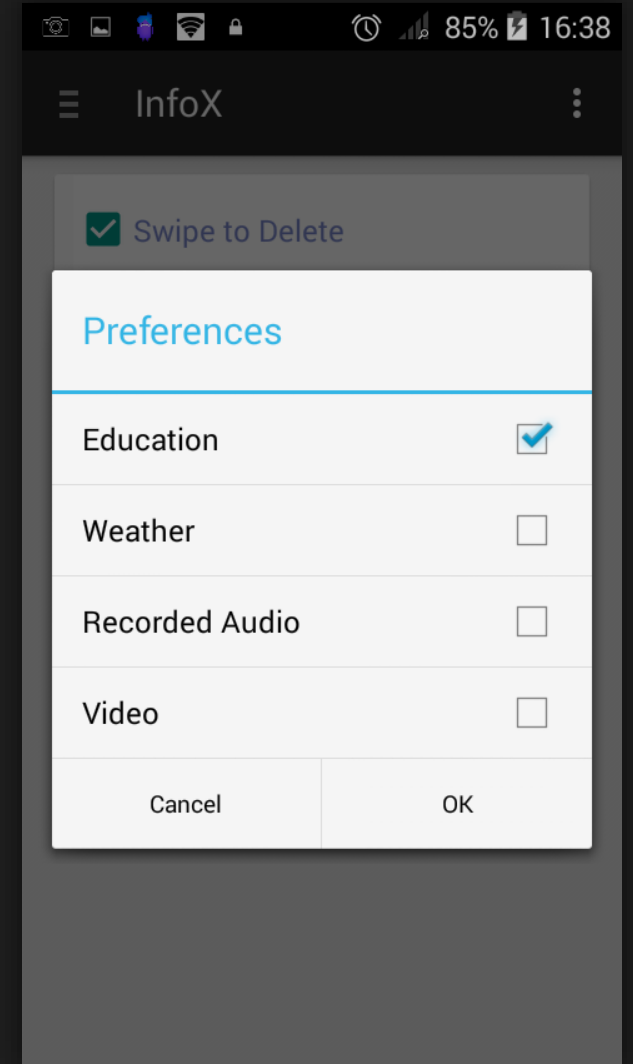

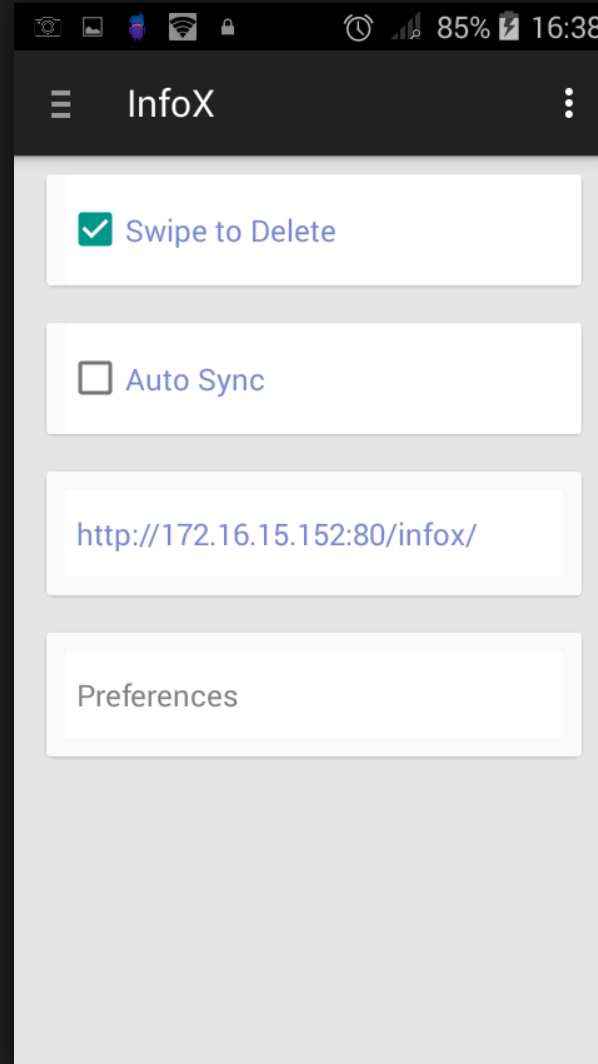

- Side Panel for Easier Navigation

Agenda

Interactive and Intuitive User Interface

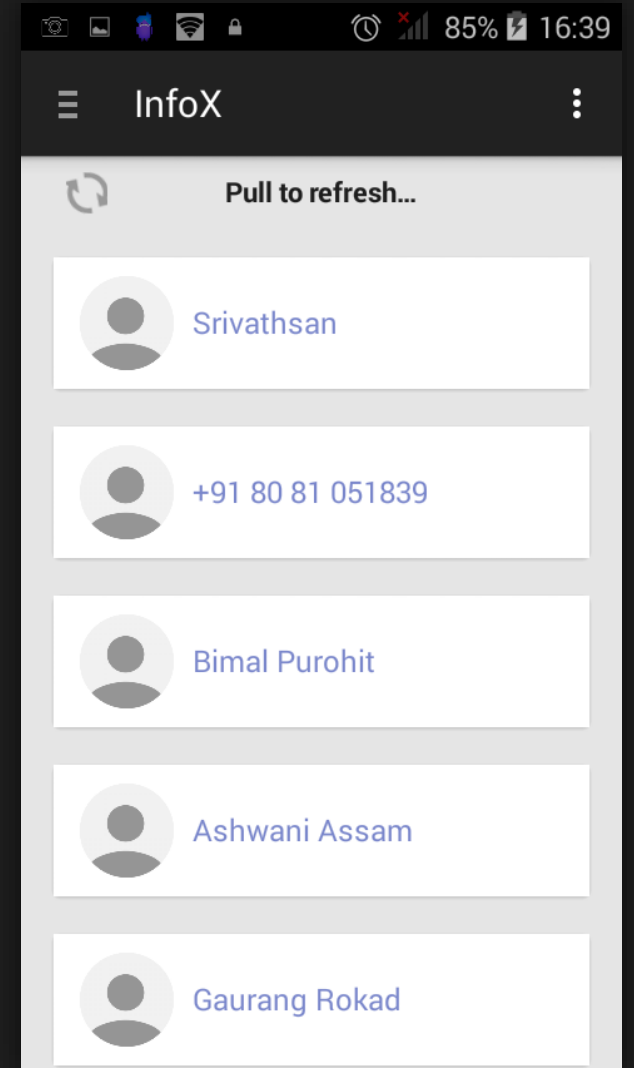

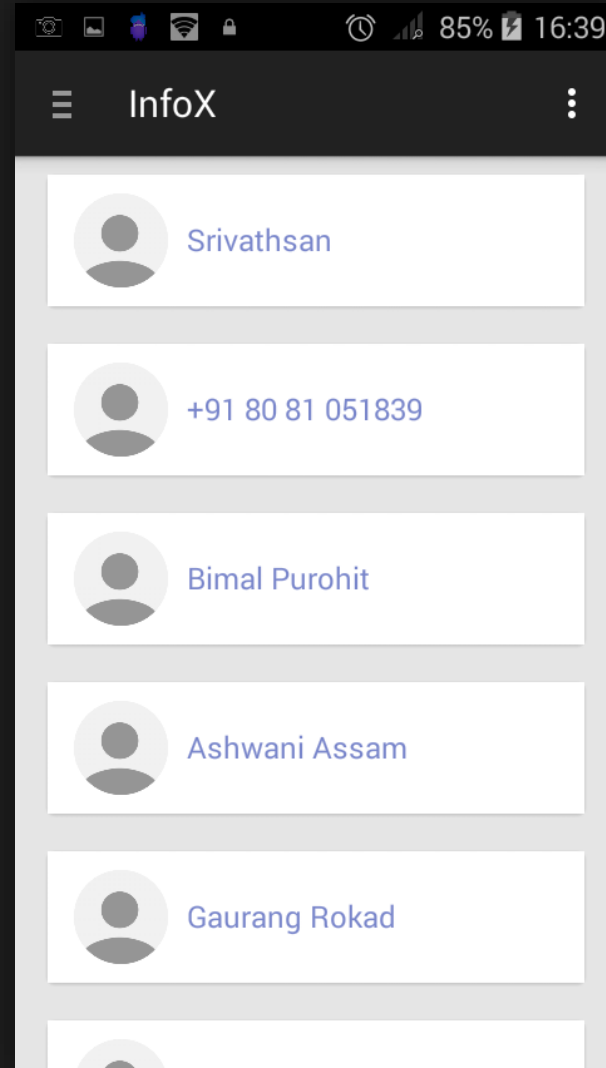

- Settings Page
- Preferences Page

Agenda

Interactive and Intuitive User Interface

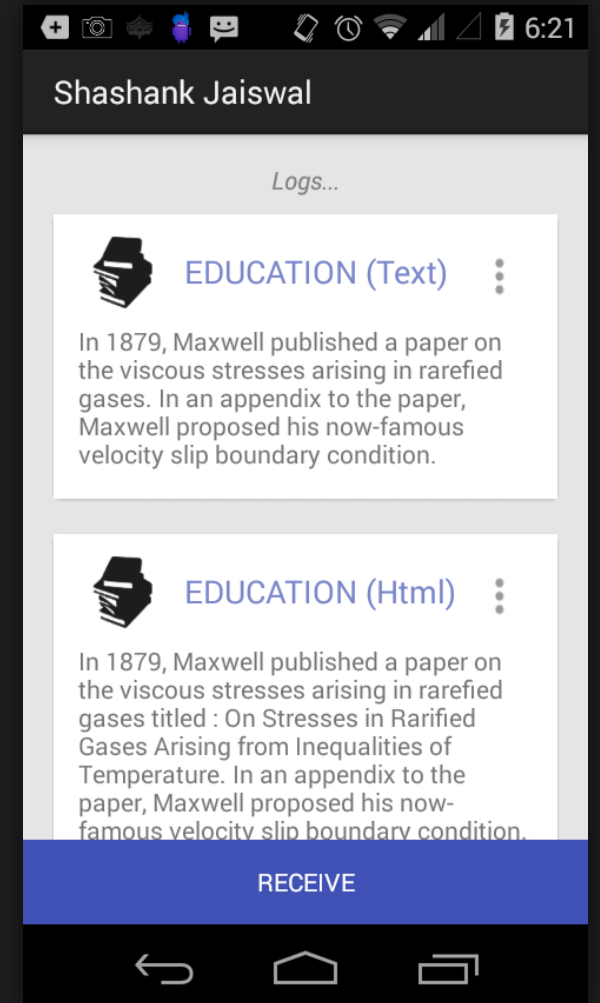

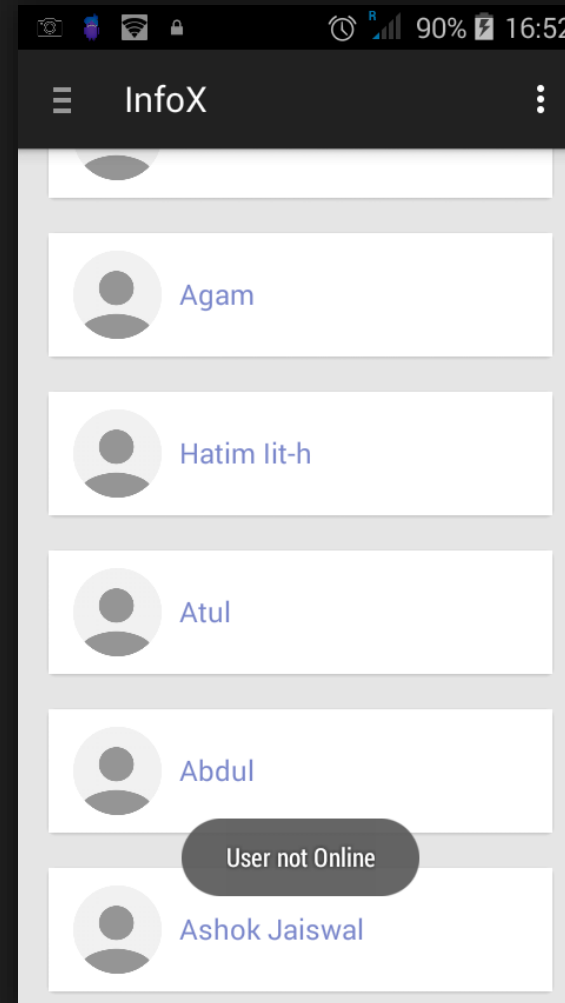

- Contact List
- Pull to Refresh Contact List

Agenda

Interactive and Intuitive User Interface

- Tap to Communicate
 - User not nearby
 - User nearby

Smart Phone

Agenda

System Diagram

- File Sharing when users are in vicinity

Note : Device 1 wants to receive data from Device 2

Agenda

Tools and Libraries Used

- Apache web server
- My SQL database
- SQL Lite database at the phone
- All Joyn open source framework by All Seen Alliance
- Modified Pull to Refresh open source library by *chrisbanes*
- Android Developer Tools

Have a nice day!
